Professional Summary

Backend-focused software engineer with 3 years of experience building scalable backend systems, cloud-native services, and cross-platform applications using Go, Node.js, Flutter, and AWS. Experienced in designing REST APIs, secure data workflows, and containerized deployments. Contributed to healthcare and SaaS platforms supporting 40k+ users while collaborating with Agile teams of up to 20 developers. Strong interest in backend architecture, distributed systems, and applied cryptography.

Technical Skills

Languages

Go, TypeScript, JavaScript, Python, Java

Backend Development

Node.js, Express, REST APIs, Microservices, GraphQL

Frontend Development

Flutter, React, HTML5, CSS3

Databases

PostgreSQL, MongoDB, SQL

DevOps / Cloud

Docker, AWS, Azure, Linux, CI/CD

Security

Vulnerability Assessment, Penetration Testing, Secure Coding

Professional Experience

Techasoft Pvt. Ltd.

Software Development Intern (Python)

Bangalore, India

Mar 2026 – Present

- Developed Python-based automation and AI solutions for FMCG manufacturing; deployed and validated systems across **3 production plants**.
- Coordinated with factory teams and client stakeholders for on-site implementation, testing, and operational approvals.
- Assisted with cross-functional technical tasks to ensure timely delivery in industrial environments.

Medoc Health IT

Project Management Intern (Engineering Role)

Remote

Jul 2024 – Jul 2025

- Led development of a multi-module healthcare platform using Flutter, Node.js, and AWS integrating Indian e-health APIs.
- Coordinated Agile delivery across 15–20 developers for deployments across 3+ hospitals.
- Designed backend workflows managing healthcare data for 40,000+ patient records.
- Conducted vulnerability assessments and security audits to strengthen healthcare data security.
- Built a secure KMS system using Go.

Appable Technologies

Freelance Software Developer

Remote

Jul 2023 – Jun 2024

- Developed sports social platform supporting tournaments and matchmaking using React, Node.js, and MongoDB.
- Built scalable backend APIs and authentication systems serving 2–3k users.
- Implemented server hardening and penetration testing to improve platform security.

Medoc Health IT

Software Development Intern

Remote

Aug 2022 – Jul 2023

- Built frontend modules and REST APIs using Flutter, React, Node.js, and SQL for Indian e-health platform.

- Contributed to DevOps automation using Docker and CI/CD pipelines.
- Improved application performance and reliability through debugging and optimization.

Selected Projects

Personal Bahi Khata

Flutter, Encryption

- Offline-first expense tracker that parses bank transaction SMS automatically.
- Implements AES encryption and Gzip compression for secure local storage.

Zundrath

Go, Cryptography

- Local key management system implementing symmetric encryption and secure key handling.
- Designed for secure data encryption workflows.

Accounting & Inventory System

Node.js, Flutter, PostgreSQL, Docker

- Full-stack inventory management platform with real-time analytics and role-based access control.
- Built scalable REST API backend with containerized deployment.

Publications

Book

Life.

Vinayak Gupta.

Sangam Publications, 2023.

Patents

Vinayak Gupta (Co-author).

SYSTEM FOR COOKING.

Application ID : 202521070227

Indian Patent Office, Published, 2025.

Research Work

Research Paper Draft

- Title: *A Novel approach to Encryption for Data Security in Mobile Applications*
- Status: Manuscript draft under preparation.
- Area: Backend systems / cryptography / Secure Systems design.

Certifications

Cyber Security and Ethical Hacking

IGTR, Indore — 2025

Education

B.Tech in Computer Science and Engineering

LNCT University, Bhopal

2021 – 2025

Technical Interests

Backend Architecture, Distributed Systems, Applied Cryptography, Programming Language Design, Compiler Design
